

EQRS UX user portal architecture

Messaging center

- Consolidated messaging center for the whole EQRS application.
- For example, Clarification Questions could be inside the messaging center.
- Users should have ability to read and compose emails/messages sent through the messaging center.
- The messaging center should be accessible from the user's portal.

Notifications center

- User should be able to view system wide notifications.
- Notifications should go away after a certain period of time.

Access & permissions

- User should be able to request new access to applications within EQRS.
- User should be able to view their access levels and pending access.
- Users should be able to manage their access.
